TKMS Acquires HyNetics LLC. From Alfa Laval

Turn-Key Modular Systems Inc. (TKMS) is pleased to announce that they have acquired the business known as **HyNetics LLC.** from **Alfa Laval Inc.** The change in ownership took place on December 29th, 2008.

“TKMS has acquired an excellent patented technology and an installed base of Single Use Mixing Systems,” said Paul Hallman, President and founder of TKMS. “The HyNetics Mixing Technology is now being used successfully by many Pharmaceutical Companies throughout the world. We have considerable patent protection that will allow us to further develop this unique technology and grow the HyNetics business through added value and continued product development. HyNetics will continue its growth in the Single-Use Industry and is now able to combine the manufacturing and design offerings of both companies providing a greater range of products and services to our clients.”

The newly acquired company will relocate to 1775-B Stout Drive, in Warminster PA., 18974 and shall carry on business as **HyNetics Corporation.** HyNetics has been managed by two key individuals, Alex Donofrio and Ken Bibbo since its inception in early 2000. Alex Donofrio will assume the role of President and Ken Bibbo will continue as Vice President of Operations. The new company will sell the HyNetics Technology based disposables as well as parts and services to the existing installed customer base and systems to new customers. HyNetics can be reached at 1-888-HyNetics (496-3842).

The HyNetics Mixing Technology is the only Global Provider of Single-Use Mixing Systems that range from 30 Liter size to 10,000 Liter Systems and provide stand alone integrated capability. The systems can be provided with on-board weigh cells, peristaltic pumps, and jacketing to maintain temperature. Each system provides automatic pressure control of the mix bag allowing the operator to perform an integrity test prior to operation. The systems can operate from near empty to full volume and can mix at full speed down to 30% of full volume. All surfaces in contact with the product are single-use; they are disposed of after each batch and replaced for the next batch. Disposables are irradiated for bio-burden reduction.

The HyNetics system:

- Eliminates the need for cleaning or sterilization between batches
- Greatly reduces cycle times
- Increases productivity
- Eliminates cross-contamination between batches or products
- Is designed to meet the strictest cGMP & regulatory requirements
- Can be customized to meet specific requirements.
