

PRESS RELEASE

Contact: Jeff Chase, Sales & Marketing Manager, 317-859-9878, jchase@sanisure.net

SaniSure, Inc. is pleased to introduce the SaniSure™ CLAMP

The SaniSure CLAMP is the first non-metallic clamp designed for single use; with the durability to withstand repetitive use. The SaniSure CLAMP is a USP Class VI, validatable, precision-calibrated clamp giving customers a true 360 degree compression reducing gasket intrusion and misalignment. When connecting BPE standard tri-clamp fittings of plastic, stainless steel, or any combination of materials, the SaniSure CLAMP is the ideal choice.

The SaniSure CLAMP's patent pending design is optimized to improve safety, minimize wrist strain and injuries, reduce operating costs, and installation time. This new innovative design has no sharp edges – reducing the risk of penetrating bag assemblies, has the ability to handle working pressures up to 100 psi, and is fully autoclavable and gamma sterilizable.

As the industry's attention focuses on reducing cleaning validation costs and improving tear down/installation times, the SaniSure CLAMP answers each of these challenges, improving overall production efficiency.

Created from an end user's perspective, the SaniSure CLAMP is quick and easy to secure, installing in less than 5 seconds with controlled torque and single hand assembly if needed. The SaniSure CLAMP is light-weight, low-profile, and completely tamper proof.

With this single use cost effective clamp, SaniSure offers the ability to provide custom colors (in minimum order quantities) for unique process coding, dating or security status, all intended to meet your individual specifications.....

Please contact us for a demonstration on how the SaniSure CLAMP can benefit your business. If you would like to see samples for proof of concept or to order the SaniSure CLAMP, contact SaniSure, Inc at 1-877-777-3005; PO BOX 2360, Moorpark, CA 93021

About SaniSure, Inc.

SaniSure, Inc. is a provider of single-use systems as well as a CGMP component manufacturer focusing on engineered solutions for the Biopharmaceutical and Biotech industries.....from concept to prototype to production. These single use systems are assembled in an ISO Class 7 (10,000) clean room. SaniSure, Inc.'s focus is to provide help in design, development and optimization of current processes, by customizing assemblies to help improve safety, reduce labor costs, improve production efficiency and overall production costs, thereby improving ease of implementation and speed to market. For further information, please contact Jeff Chase, Sales & Marketing Manager, at (317) 859 9878 or (317) 657 4194 or jchase@sanisure.net.
